Quality for proud professionals since 1975

Your choice of workwear determines how visible, effective and protected you are at work. Different jobs require workwear with different functionality and durability, and the garments must keep you warm or cool depending on the conditions. Jobman offers a wide range of workwear which can be combined to suit all types of work, both indoors and outdoors, all year round. We speak to users in a wide range of industries to discuss their needs, and convert the knowledge we gain into fully functional workwear adapted to your daily work environment.

Jobman workwear is developed and manufactured for professionals who want the best. Durability has been our watchword since 1975, and so it will always be. At Jobman Workwear, quality isn't just about choosing the right material. The garments must also be comfortable and allow for movement during challenging work. Together with new features and modern design, the clothing also makes you resilient at work. Our vision is for all professionals to be proud wearers of Jobman workwear, every day.

Quality workwear down to the smallest detail

When you wear Jobman clothing, you are also wearing years of technical and functional development applied to every detail. Together, these important details create comfortable, easy to wear garments with a modern design and exceptional durability. These are clothes that are well designed using generations of solid expertise. Choosing high-quality, durable clothing is also an economically sound and sustainable decision – the basis for our quality ethos that runs through every garment.

One example is our trousers for craft work, designed to meet the specific needs of craftspeople. Hanging back pockets, reinforced holster pockets and a zipped leg pocket ensure easy access to tools and keep your personal effects secure. The materials have been carefully chosen and combined in various areas of the trousers, cut and sewn to fit the body's natural shape. The result is robust trousers that allow for free movement and ventilation where it matters.

2191 Craftsman Trousers Stretch

1 | BACK POCKETS

Back pockets are partially detached to give easier access.

2 | WAISTBAND

Silicone rubber shirt-grip in waistband holds sweater and trousers in place.

3 | HOLSTER POCKETS

Spacious, reinforced holster pockets with extra compartment.

4 | HAMMER LOOP

5 | CROTCH LINING

Crotch lining in reinforced stretch Cordura®.

6 | RULER POCKET

Ruler pocket with knife pocket.

7 | ENTIRE TROUSERS

4-way stretch in durable Rip-stop material (entire trousers).

8 | KNEE AND BACK OF KNEE

Pre-bent knees with kneepad pockets in two positions made from durable stretch Cordura®. Mesh at back of knee for ventilation.

9 | LEG POCKET

Leg pocket with zip, phone pocket and ID card pouch.

10 | ANKLE-CUFF

3M™ reflective strips and drawstring in ankle-cuff.

2312 PRACTICAL

2912 FUNCTIONAL

2134 TECHNICAL

2191 ADVANCED

Choose the right level of functionality for your workwear

To help you select the right clothing for your work, all our products are divided into four categories according to their level of functionality. We have called the levels Practical, Functional, Technical and Advanced. In each category we have optimised the performance of garments, balancing cost with specification. All this to make it easier for you to choose exactly what you need at work.

PRACTICAL

Practical is the newest category of workwear in the Jobman range. Of course, as with all our products, the quality is very high, but fewer features and simple solutions help keep the price down, making Practical a great choice for the price-conscious customer.

FUNCTIONAL

The Functional range is designed for those requiring functional workwear for use in less demanding environments. Functional workwear is smart, well-designed, versatile and professional looking.

TECHNICAL

The Technical range is for those needing slightly tougher workwear, for example in situations requiring certification. You work in different environments and with different types of tools. Durable workwear with features that protect you and make your job easier.

ADVANCED

Advanced is for those who want the best in workwear. It offers the maximum functionality suitable for all situations and the hardest-wearing materials for the most demanding environments. Workwear to live and work in, workwear that is part of who you are.

All you need to know about visibility clothing

Design regulated by EU standard

The design of high visibility clothing is regulated by EU standard EN ISO 20471. It states what colours must be used, where the reflective strips must be located and which information must be included with the garments. Requirements apply to the material's properties to ensure maximum visibility and to enable washing without a loss of visibility. The garments must also be designed a certain way to ensure maximum visibility.

Tested by selected test institutes

When the garments are approved along with the documentation, a certificate is awarded stating that they fulfil the requirements of standard EN ISO 20471. The garments are CE marked indicating certification and featuring information on care and how the garment should be used.

High visibility clothing is divided into three classes

Garments are divided into different classes depending on their visibility. Classification is mainly dependent on the garment's fluorescent areas and reflective surfaces.

Class 3: most visible. Total fluorescent area must be at least 0.8 m² and the reflective strips 0.2 m².

Class 2: Total fluorescent area must be at least 0.5 m² and the reflective strips 0.13 m².

Class 1: least visible. Total fluorescent area must be at least 0.14 m² and the reflective strips 0.1 m².

In all classes, there must be no more than 10 cm between the reflective strips. This means that the zip on a jacket must be closed, for example.

Can be combined with other garments

It is possible to combine garments from different classes, however combining classes 1 and 2 does not automatically create class 3. To attain class 3, the clothing's total fluorescent area must be at least 0.8 m². Garments of different colours may also be combined. They must, however, be certified together to allow their whole area to be calculated, otherwise only a single garment's area is applicable.

Yellow is the most visible colour

The EU standard specifies three approved fluorescent colours: yellow, orange and red. The certificate states that the garments are approved for combining. Tests have shown the colour yellow to be twice as luminous as orange or red. Furthermore, yellow is the only one of the three colours which is fluorescent in direct sunlight and sodium light, which is the type of lighting used in tunnels, for example.

Reflective strips for visibility in the dark

Fluorescent colours lose their luminosity in the dark. Garments therefore have reflective strips to reflect the light from vehicle headlamps in the dark. Reflective strips on the legs mean the wearer can be seen from greater distances.

Sun protective garments

UV-garments provide good and full protection against the sun's UV-rays, the type of rays that cause sunburn. Jobman's UV-garments are certified for UPF 40+ and provide excellent protection, in accordance to EN13758-2: 2003 + A1: 2006.

UPF (Ultraviolet Protection Factor) is the measure used on sunblock in sun protective garments, which is similar to SPF (Sun Protection Factor) used for sunscreen lotion. Which UPF class a garment receives depends on how much UV-radiation is passed through the fabric. Jobman's UV-Pro is made with a dense knitting technique that gives the garment a UV-protection without strong chemicals.

SPUN-DYE T-SHIRT

- T-shirt in quick-drying fabric.
- Environmentally-friendly production with spun dye.
- Quick drying material.

Comfortable functional T-shirt in "spun-dyed" polyester which quickly transports moisture away from the skin. The shirt dries fast, keeping you dry and fresh all day long. Spun dyeing is an environmentally friendly colouring technique that consumes less water, energy and chemicals. Spun dyeing also gives a very high colour density, which means that the garment's colour does not change over time.

Material: 100% polyester Spun dye, 135 g/m².

BASE LAYERS

The base layer is the first layer and has moisture-wicking properties as used in underwear made from man-made fabric, for example.

MIDDLE LAYERS

The middle layer should be insulating fleece, softshell or pile material. Jobman's microfleece garments are extremely comfortable and ideal middle layers.

OUTER LAYERS

The outer layer should be weatherproof and breathable, allowing humidity to evaporate and protecting you from the wind and the rain.

- Jobman reflective strips for visibility.
- Adjustable drawstring at hem.

Jacket in 3-layer softshell with birdseye knit on the outside, wind and water-repellent membrane and fleece inside. The jacket is light and smooth with room for movement. Adjustable drawstring at hem. Protects against wind and light rain (10000 mm water column, untaped seams) and has good breathability. Reinforcements in black fabric on exposed parts. Black ribbed cuffs on sleeves. Spacious front pockets with zip. Chest pocket with zip and D-ring for ID card holder. Front zip with inside storm flap to protect against draughts and chafing of the chin. Zip puller with reflective details. Seamless soft reflective strips featuring Jobman design. Reflective strips on the shoulders and in the lower back for optimal visibility.

SPUN-DYE VISION T-SHIRT

- Quick-drying and moisture wicking.
- Reflective strips on the shoulders ensure high visibility.

T-shirt in smooth polyester, sleeves and side panels in soft interlock and front and back panels in birdseye knit for optimal moisture wicking. Spun dyeing is an environmentally friendly colouring technique that consumes less water, energy and chemicals. Flatlock seams in fluorescent colour and reflective strips on the shoulders ensure high visibility.

Material: 100% polyester, 135 g/m² interlock, 160 g/m² bird-eye.

Art no: 65562053-9921 black/yellow

Art no: 65562053-9931 black/orange

Size: XS-4XL

5522

PRACTICAL

SPUN-DYE T-SHIRT

- T-shirt in quick-drying fabric.
- Environmentally-friendly production with spun dye.
- Quick drying material.

Comfortable functional T-shirt in "spun-dyed" polyester which quickly transports moisture away from the skin. The shirt dries fast, keeping you dry and fresh all day long. Spun dyeing is an environmentally friendly colouring technique that consumes less water, energy and chemicals. Spun dyeing also gives a very high colour density, which means that the garment's colour does not change over time.

Material: 100% polyester Spun dye, 135 g/m².

How does our shell and rainwear work?

Water column and breathability

A fabric's impermeability is measured in millimetres water column (mmwc). This is measured by stretching 10 cm² of fabric over an equally large tube. The tube is filled with water and the height of the water column is measured when the first drop of water penetrates through the fabric. A fabric is classified as waterproof when it has a water column of 2,000 mm or more.

A fabric's breathability is measured in grams per square metre in 24 hours (g/m²/24 hrs or MVP). The higher the value, the easier it is for the fabric to allow excess humidity and water vapour to evaporate. These two values are both needed in order to determine a garment's properties. A high water column/

denser fabric can have poor breathability. A garment with good breathability is more comfortable to wear and helps prevent the garment from feeling damp inside.

Taped seams

For the garment to be considered completely waterproof, the garment's seams must be taped otherwise water will penetrate through the seams. This means that a tape is placed over the seams inside the garment. Completely waterproof garments have all seams taped and water-resistant garments have the most critical seams taped. Using a jacket as an example, the seams over the shoulders as well as the front and back seams, which are at risk of being exposed to the most moisture, are taped.

SPUN-DYE T-SHIRT

- T-shirt in quick-drying fabric.
- Environmentally-friendly production with spun dye.
- Quick drying material.

Comfortable functional T-shirt in "spun-dyed" polyester which quickly transports moisture away from the skin. The shirt dries fast, keeping you dry and fresh all day long. Spun dyeing is an environmentally friendly colouring technique that consumes less water, energy and chemicals. Spun dyeing also gives a very high colour density, which means that the garment's colour does not change over time.

Material: 100% polyester Spun dye, 135 g/m².

DUO-PACK UNDERWEAR

- Ideal underwear as Layer 1.
- Sweat particles evaporate extremely quickly.
- Top with extended back and Long johns with Y-front.

Top with extended back and polo neck with diagonal zip that doesn't chafe the neck. Long johns with Y-front. Elastic side panels. When applying the layering principle, Dry-Tech™ fabric is ideal as layer 1. It is built up from micro-fibres that wick sweat away from the body and spread it over a wider surface area. The microscopic sweat particles then evaporate extremely quickly, keeping you feeling fresh and dry all day long.

Material: 70% polyester / 30% viscose, 130 g/m².

Washing instructions

We test all of our clothing so that you can be sure it will withstand the specified washing conditions. Sort first according to the wash temperature and colour, then according to the other washing instructions. Garments marked "wash separately" may discolour or be discoloured by other garments. For stubborn stains, we recommend applying a stain remover before washing. Use colour safe washing detergent with coloured clothing and follow the dosing instructions on the packaging.

Do not use washing detergent that contains bleach, perborates, percarbonates or sodium hypochlorite. Jobman does not recommend rinsing or the use of fabric softeners. Most of the garments feel better when hung to dry. Shake the garment, pull out the seams and hang it up. When tumble drying, do not dry the garments completely. This can cause significant shrinkage and wear. With the proper care, your Jobman workwear will have a long life.

Maximum washing temperature

Dry clean only

Do not chlorine bleach

Cannot withstand dry cleaning fluid stronger than tetrachloroethylene

Do not dry clean

Do not tumble dry

Tumble dry at lower temperature
(max. 60 °C/140 °F)

Tumble dry at higher temperature
(max. 80 °C/176 °F)

Iron at max. 110 °C/230 °F

Iron at max. 150 °C/302 °F

Iron at max. 200 °C/392 °F

Symbols

OEKO-TEX

Oeko-Tex is an internationally defined standard based on a voluntary undertaking. To obtain a certificate, the entire manufacturing process and all the parts of a garment must comply with stringent human and environmental requirements. With Jobman Workwear you can be sure that you will not be exposed to chemicals that may damage your health. Many of our garments are Oeko-Tex certified, which guarantees that they do not contain substances that may be harmful when worn against the skin.

EN ISO 20471

HIGH-VISIBILITY CLASS

Garments are divided into classes depending on their visibility.

Classification is mainly dependent on its conspicuity: the garment's fluorescent area and retro-reflective surface.

Class 3: Highest class. The total fluorescent area must be at least 0.8 m² and the reflective strips 0.2 m².

Class 2: The total fluorescent area must be at least 0.5 m² and the reflective strips 0.13 m².

Class 1: The lowest class. The total fluorescent area must be at least 0.14 m² and the reflective strips 0.1 m².

Detailed information on the visibility rules can be found on page 10.

LAYERING

In cold weather it is important to wear layers of clothing to keep warm. Practical layers you can add or take off are especially important when moving between warm and cold spaces.

1. The first layer (layer 1) should transport humidity out to the next layer. Ideally, technical underwear of man-made materials.

2. The middle layer (layer 2) should be insulating fleece, softshell or furry material. Jobman's microfleece garments are extremely comfortable and ideal middle layers.

3. The third layer (layer 3) should be windproof and water repellent to protect you, but must be able to breathe and allow humidity from the first two layers to evaporate.

BREATHABILITY

The symbol shows that the fabric is wind-proof, waterproof and breathable. For optimum comfort at work, it is important that the body maintains an even temperature and remains dry. A shell garment lets the body breathe and lets out excess moisture that would otherwise have a cooling effect.

EN 14404

KNEEPADS

Trousers with the symbol are certified according to EN 14404: 2004 + A1: 2010 Type 2 Level 1 together with Jobman kneepads 9943, 9944 and 9945.

EN 342

COLD

Garments certified in accordance with EN 342 keep you protected from cold ($\leq -5^{\circ}\text{C}$). Requirements refer to thermal insulation, air and moisture permeability. Tests measure garments' insulation capacity with a minimum thermal resistance (CLO) value of 1,71.

EN 343

RAIN

All Jobman's rainwear is certified according to the EU EN 343 standard, the bad weather certificate.

EN 13758

UV PROTECTIVE

The symbol shows that the garment is certified according to EN 13758-2:2003 + A1: 2006, UPF 40+. UPF (Ultraviolet Protection Factor) is the measure used for sunblock in sun garments.

EN ISO 11612

EN ISO 11611

FLAMEPROOF

100% cotton with flame-retardant treatment. CE-certified, tested and approved in accordance with EN ISO 11611 and EN ISO 11612. Certification means that the material and the garment's design protects against edge ignition, flame spread and melting. It can also withstand heat according to the test standards, preventing burns.

DRY-TECH™

The symbols mean that the clothing is moisture-wicking. Read more about Dry-Tech™ on page 193.

4-WAY STRETCH

The symbol shows that the garment is made of four-way synthetic fibers and provides elasticity in height and width.

PANELS

The symbol shows that parts of the garment are made of 4-way synthetic fibers.

Material

Textiles are produced from many different materials. Some are natural and others are man-made from oil or derived from animals. Textile fibres are usually divided into natural fibres and man-made fibres. Examples of natural fibres are cotton, silk and wool. Acrylic, polyester and polyamide are synthetic fibres. Different fibres give fabric different properties, for example, cotton's softness and ability to absorb moisture, polyester's wrinkle-free properties and ability to hold colour and polyamide's durability.

By blending fibres you get the best of both worlds in the same fabric and thereby get a new functional material. Today's technology allows us to develop materials with designed properties and manufacture workwear that is lightweight, durable and dirt repellent. We have put a lot of effort into developing materials with just the right composition for our workwear. We always keep the customer's needs and professional requirements in mind.

Often, a combination of different materials is required to obtain the desired product characteristics. For instance, a comfortable garment in a pleasant material requiring a reinforcing material such as Cordura®, Kevlar® or our own FA™ material on exposed parts to increase the garment's durability and strength. Many of our winter garments are made from durable polyester with a windproof and water repellent polyurethane coating that releases perspiration and keeps you dry in all weather conditions.

Soft, porous materials such as pile, quilt and fleece keep out the cold by retaining air and creating a warming middle layer. A number of carefully-chosen layers also keep you warm and dry all day long. It is important that the innermost layer keeps moisture away from the surface of the skin. The next layer should be insulating, by trapping warm air close to your body. In very cold conditions, woollen or polypropylene underwear is the best solution, along with an extra pair of socks and a beanie. Jobman workwear protects you in all situations.

POLYESTER/ COTTON

The combination of polyester and cotton offers the best of both worlds. The softness of cotton and the durability and colourfastness of polyester make our cotton/polyester blends very comfortable. Polyester/cotton garments hold colour for longer and shrink less.

COTTON/ POLYAMIDE

The cotton/polyamide blend is an easy-care fabric which is water and dirt repellent and well suited for clothing intended for dirty environments. Polyamide does not absorb moisture, and dries much faster in combination than pure cotton.

POLYAMIDE

Polyamide is a fabric typically added to make clothes more abrasion resistant. It can take a lot of wear and tear yet it is a soft and comfortable material that does not freeze stiff in cold weather.

POLYESTER/UV

Made with a dense knitting technique that gives the garment UV-protection without the use of strong chemicals. Jobman UV-Pro garments provide good and full protection against the sun's UV-rays.

4-WAY STRETCH

Jobman 4-way stretch is created by synthetic fibres with exceptional elasticity. It provides extreme comfort, fit and flexibility and the opportunity for a tighter fit, without restricting movement. It is very hard-wearing.

REINFORCEMENT

CORDURA®

Cordura® is a polyamide fabric with high strength and excellent abrasion resistance. Often used to reinforce and protect knees and other exposed parts.

KEVLAR®

Kevlar® is a para-aramid fibre with extremely high tear and abrasion resistance.

FA™

FA™ has been developed by Jobman to reinforce workwear. It is a polyamide material which is very strong and protects against the penetration of sharp objects.

COTTON

Cotton is a soft and comfortable natural material that is easy to wash. Jobman pre-washed cotton twill is extra sturdy and durable, it ages beautifully, retains its properties and just gets more comfortable with each wash. Keep in mind that cotton absorbs moisture, and is therefore not always suitable for working in damp environments.

POLYESTER

Many of our winter clothes and softshell jackets are made of polyester. It is a popular and functional material. Polyester clothes are comfortable, they stay soft and their low absorbency allows them to dry quickly. The fibre can be woven, knitted into sweaters and spun into fleece. Polyester garments don't fade and are hard-wearing.

STAR POLYAMIDE

STAR polyamide is Jobman's proprietary material. The unique feature of STAR is that it is equally strong in all directions, providing a well-balanced and durable fabric. The back of the fabric is 'peached' for a soft and comfortable feel on the inside. It has excellent drying properties.

DRY-TECH™

Dry-Tech™ is a man-made fabric that wicks sweat away from the body and spreads it over a wider surface area. This is known as the capillary effect. This means the garment stays dry. Dry-Tech™ is a wash-and-wear fabric that does not fade or lose its shape. This quick-drying material can be washed often and is designed to be worn next to the skin.

CAVALRY TWILL

One of the strongest twills available is cavalry twill. Its structure gives the fabric movement and stretch. Cavalry twill is best suited to trousers and is ideal for environments where you need a durable yet flexible fabric.

CORE

Ring-spun cotton/polyester offers a unique quality with the best of two worlds. The technology provides a core thread of polyester which is enclosed by cotton. Polyester fabric gives high durability and cotton is comfortable against the skin.

STAR HV POLYESTER

STAR polyester is Jobman's proprietary material. The unique feature of STAR is that it is equally strong in all directions, providing a well-balanced and durable fabric. The back of the fabric is 'peached' for a soft and comfortable feel on the inside.

SPUN DYEING

Spun Dyeing is an environmentally-friendly dyeing technique which uses less water, energy and chemicals than the traditional technique. Spun Dyeing also gives a very high colour density, i.e. the colour of garments does not change over time.

LINING

QUILTED LINING (WADDING)

Quilt comes in various thicknesses. It consists of thin fabric with polyester wadding. The smooth surface makes the garment easy to put on and take off. Quilt lining is therefore suitable when movement is important, for example, winter overalls and thick jackets.

PILE LINING

Pile is a warm furry lining material suitable for winter jackets. It is a man-made polyester fabric that keeps you warm, does not absorb moisture and dries quickly.

FLEECE

Polyester fleece is a very popular fabric, found in sweaters and in linings. It stretches and feels warm. Fleece makes a good middle layer to wear under windproof materials.

Size guide

Jobman offers a wide range of sizes, particularly for trousers. It is important to choose the right leg length for trousers with kneepad pockets, so that they are correctly positioned on the leg. All of our men's trousers are available in three size categories. C sizes with normal leg length, e.g. C50, C sizes with long leg, e.g. C150, and D sizes with short leg, e.g. D96. If you are not able to try on the clothes in the shop, you can take your measurements to ascertain the right size. Take your measurements while wearing close-fitting underwear and do not pull the measuring tape too tight. See the size chart on the next page.

A | CHEST

Measure the circumference around your torso at the widest part of the chest/bust.

B | WAIST

Measure the circumference at the same level as your belly button or at the narrowest part.

C | HIP

Measure the circumference around your hip at the widest part.

D | INSIDE LEG

Measure from the crotch down to the sole of your foot. Make sure the tape is straight.

PICTOGRAM
Every CE-marked garment must have a label bearing a pictogram that shows the measurement range for the garment. This allows you to check inside the garment to make sure it's the right size.

WOMEN'S SIZES

	XS		S		M		L		XL		XXL	
	32	34	36	38	40	42	44	46	48	50	52	54
A Bust	76	80	84	88	92	96	100	104	108	112	116	120
B Waist	60	64	68	72	76	80	84	88	92	96	100	104
C Hip	84	88	92	96	100	104	108	112	117	122	128	132
D Inside leg	78	79	79	79	80	80	80	80	81	81	81	81
Corresponding inch size	24/31	25/31	27/31	28/31	30/31	31/31	33/31	35/31	36/32	38/32	40/32	42/32

The measurements correspond to your body measurements except for the inside leg, which is the length of the garment (inside leg, crotch to ankle).

CSR and sustainability

At Jobman, we place great emphasis on sustainability and take responsibility for how our operations affect both people and our planet. Of course, we hope that you are satisfied with our products and also with us as a company.

As a part of New Wave Group, we pursue an active sustainability work towards a vision of sustainable growth where business solutions are not only financially profitable, but also sustainable from a social and environmental perspective.

What makes the biggest difference is how we conduct our everyday business. That is why we integrate sustainability into

our core operations and processes. The work includes, amongst several things, improved working conditions in production countries, a progressive work with chemicals and streamlining transport and logistics.

We invite you to take part of our work at group level with CSR and sustainability. More information is available in New Wave Group Sustainability Report, where we highlight important activities, achievements and ambitions for the future. You find it on New Wave's website www.nwg.se/csr/

AMFORI BSCI (BUSINESS SOCIAL COMPLIANCE INITIATIVE)

Amfori BSCI is a business driven initiative for companies committed to improve working conditions in the global supply chain. Our Code of Conduct have requirements on minimum wage, working hours, the prohibition of child labour and several other important criteria.

Oeko-tex® -certification

What does the label mean?

OEKO-TEX® is the world's leading and best known certification for textiles, leather and accessories that have been tested for harmful substances.

If a textile article carries the STANDARD 100 label, you can be certain that every component of this article, i.e. every thread, button and other accessory, has been tested for harmful substances and that the article therefore is harmless in human ecological terms.

The test is conducted by independent OEKO-TEX® partner institutes. In the test they take into account numerous regulated and non-regulated substances, which may be harmful to human health. In many cases the limit values for the STANDARD 100 go beyond national and international requirements.

More information on OEKO-TEX® official website:
www.oeko-tex.com

Test criteria

Examples of parameters that are included in the Oeko-Tex® Standard 100 are prohibited azo dyes, carcinogenic and allergenic dyes, phthalates, formaldehyde, pesticides, heavy metals, certain organochlorine and organotin compounds, biologically active products, and flame retardant materials.

Four classes of products

In order for the limits to be relevant for different types of products, there are four different types of product classes based on the certified product's intended area of use:

Product Class I – Products for children up to 3 years.

Product Class II – Products that mostly come in direct contact with skin.

Product Class III – Products which do not come in contact with the skin, or do so only to a small extent.

Product Class IV – Furnishing and decorative materials.

The Oeko-Tex® brand

A product may only be Oeko-Tex® labelled or certified if all the components meet the requirements for the appropriate product category. The product must also belong under one certificate. STANDARD 100 by OEKO-TEX® continuously adapts the requirements to the REACH legislation for relevant parameters.

The certificate is valid for one year (12 months) with a specific date.

For information regarding certified articles www.jobman.se/en/

WorldSkills Sweden

WorldSkills Sweden's mission is to raise the quality of Sweden's vocational education, increase interest in those embarking on upper secondary education and elevate the status of modern vocational education in the building, industrial, technical, IT and service sectors, among others. This is achieved through changing the image of vocational education and the future labour market. Technical and industrial occupations are no longer repetitive, as they are traditionally seen.

WorldSkills Sweden is a collaboration between The Confederation of Swedish Enterprise (Svenskt Näringsliv), The Swedish Trade Union Confederation (LO) and the Swedish Government through The Swedish National Agency for Education (Skolverket), Ministry of Education and Research (Utbildningsdepartementet) and

Swedish National Agency for Higher Vocational Education (Myndigheten för yrkeshögskolan). It also involves professional organisations, vocational committees, government agencies, schools and companies active in this urgent and important initiative.

WorldSkills Sweden's mission is to increase the status, quality and attractiveness of Swedish vocational education. One way it does this is by organising professional competitions such as the WorldSkills Sweden Championships and advocating for the Swedish National Skills Team's participation in the World Skills Competition and EuroSkills.
